SPATIAL DATA

This project relies on several external spatial datasets that are too large to be stored directly in the GitHub repository. To replicate the analysis, these datasets must be downloaded manually and placed in the appropriate directory.

All spatial data files should be saved in this directory: ***DRC_Electricity_HCFs/data/spatial/***

Four datasets are required:

1. A shapefile of health zone boundaries for the DRC, which should be named: *rdc_zone_de_sante_09092019.zip*
    a. This file contains national health zone boundaries and is distributed by the Ministry of Public Health of the DRC, commonly via the Humanitarian Data Exchange (HDX) and can be downloaded from http://data.humdata.org/dataset/drc-health-data. The ZIP file should be placed directly in the spatial data directory and should not be unzipped manually, as the replication code handles unzipping.
2. A population density raster from WorldPop, which should be named: *cod_ppp_2020.tif*
    a. This file contains gridded population estimates for the DRC at 100 m by 100 m resolution, with values representing the estimated number of people per grid cell. The data can be downloaded from https://hub.worldpop.org/geodata/summary?id=40759 by selecting the 2020 population raster for the DRC.
3. Relative Wealth Index by Meta Data for Good, which should be named: *cod_relative_wealth_index.csv*
    a. This dataset provides point-level estimates of relative wealth and includes latitude and longitude coordinates. The data can be downloaded from https://dataforgood.facebook.com/dfg/tools/relative-wealth-index/ by selecting the Democratic Republic of Congo and downloading the CSV version of the data.
4. Conflict event data from the Armed Conflict Location and Event Data Project (ACLED), which should be named: *acled_drcconflictdata.csv*.
    a. This dataset contains geocoded conflict events and associated fatalities for the DRC. The data can be downloaded from https://acleddata.com/data-export-tool/. You must have an account and appropriate levels of data access. Then you should specify the date as Jan 2021 – December 2024; Event type as Explosions/Remote violence, Battles, Violence against civilians, Riots; All actor types; and Country as Democratic Republic of Congo as the country. Leave the output options blank. You may have to download in multiple chunks of dates due to download restriction size. After downloading, the file should be renamed to match the expected file name.
